

What are logos? How can I copy and enlarge using a grid?

Copy the shapes into the grids on the right as accurately as possible. Use a ruler if needed and use the negative space (the space *around* the images) to help observe and copy the shapes more accurately.

Now select two squares from either the 2x2 or the 3x3 grid and write the correct letters and number in the borders.

Carefully *enlarge* the selected squares into the space provided using a ruler where needed. Try to copy accurately so the enlarged image keeps the same *proportions* as the original image.
