

Key Knowledge:
 Where are these super structures?

The Eiffel Tower is in France's capital city Paris. It is 324m tall and has a radio antenna at the top.

The Great Wall of China was built along the Northern border of China. It is 13,121 miles long.

The Leaning Tower of Pisa is built in the city of Pisa in Italy. It is thought to lean because of weak foundations.

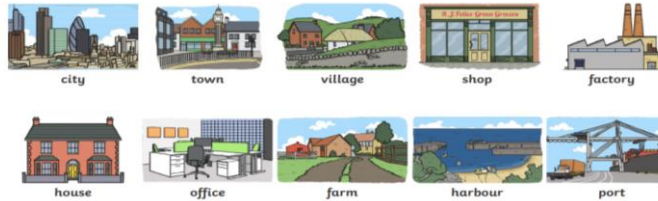

The Empire State Building is in Manhattan in New York City. It is 443m tall.

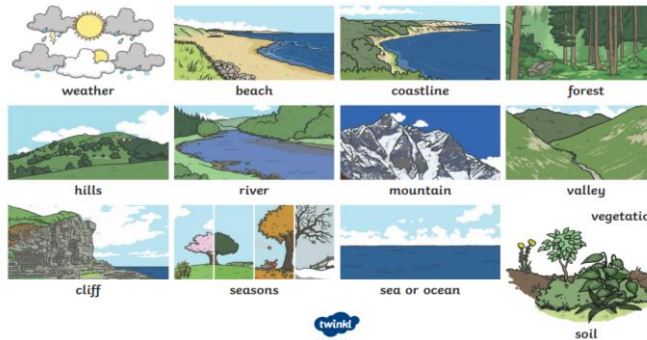

Geographical Features and Characteristics:
 Linking these features to the locations of the super structures.

Human Geography

Physical Geography

Key Vocabulary:

The Burj Khalifa	It is of mixed-use meaning parts of it are apartments, parts are restaurants and parts of it are hotels.
Big Ben	It is the name of the bell, which chimes inside the Elizabeth tower.
The Eiffel Tower	It was made as an exhibit for the World's fair in 1889. It is one of Paris's top tourist attractions.
The Taj Mahal	It was made as a mausoleum for the then emperor's late wife.
The Empire State Building	It is used as office space for different companies. If you visit, you can stand on the observation deck and look at the views.
The Great Wall of China	It was built to protect China from its enemies in the North. It can be seen from space.
The Leaning Tower of Pisa	It was originally built as a bell tower to house the seven bells of a nearby cathedral (Duomo di Pisa).
