

Year 10 Maths Higher Knowledge Booklet Term 1

Name:

Class:

Order	Unit	Links	Pre-requisite skills
1	Integers, powers & roots		
2	Lines, angles & shape		
3	Simplifying & substituting	Unit 1	Using powers, listing factors, understanding product / sum.
4	Area and perimeter	Unit 2	Forming expressions for area/perimeter algebraically through use of brackets, correct notation and simplifying expressions.
5	Calculations & Accuracy	Unit 1	Understanding numbers.
6	Construction and LOCI	Unit 2	Measuring angles for bearings, parallel line angle facts.
7	FDP	Unit 1	Using powers, understanding lowest common multiples.
8	Sequences, functions and graphs	Unit 3/5	Substituting into a function applying BIDMAS to calculate coordinates, factorising for roots of quadratics, understanding powers and all 4 operations with negatives.
9	Ratio & Proportion	Unit 1/7	Decimals/powers as multipliers, calculating/understanding fractions as parts.
10	Transformations	Unit 2/8	Identifying 90/180/270 degrees, plotting mirror lines of basic functions.
11	Pythagoras and Trigonometry	Unit 1/2/3/4/5	Powers/surds, types of triangles, use in area/perimeter problems to find required lengths, rounding answers.
12	Forming and solving	Unit 3/4	Properties of 2d shapes, angle facts including polygons & parallel lines, algebraic notation and simplifying, forming expressions.
13	Measures	Unit 1/7	Calculating, multiplying decimals and powers of 10 for metric conversions.
14	Volume and Surface area	Unit 4/5/13	Area of 2d shapes, rounding/calculating with bounds, conversion of units (length/area/volume), calculating missing sides using pythagoras/ trigonometry.
15	Probability	Unit 1/7	Types of numbers, calculating with fractions & decimals.
16	Inequalities	Unit 12/8/5/7	Solving equations, rounding, plotting graphs for regions, calculating with fractions.
17	Statistics	Unit 1/6/9/16	Using a protractor for pie charts, proportion to calculate angles for a pie chart, use of inequality symbols for recording data.

Homework 1 Due	
Homework 2 Due	
Homework 3 Due	

<u>Overview</u>	Learning Objective		
Topic: Integers, Powers and Roots	- Calculate with stand- ard index form. Multiplication.	- Use index notation involving fractional negative powers.	- Use index notation involving fractional negative powers.
Big Questions Convince me that $\sqrt{72}$ = $6\sqrt{2}$ - What do I need to multiply (4 + $$) by to give 11 + $6\sqrt{3}$ as a simplified answer?	 calculate with standard form. Division. Calculate with standard form. Addition. Calculate in standard form. Addition. Calculate in standard form. Substraction. Use index notation for negative integer indices Know that n^{1/2} = √n and n^{1/3} = ³√n for any positive number n. Use index notation and index laws for simple fractional powers such as 16^{3/4} 	 - Know that n^{1/2} = √n and n^{1/3} = ³√n for any positive number n. - Use index notation and index laws for simple fractional powers such as 16^{3/4}. - Simplify surds to the form a√b -multiplying surds 	- Rationalise a denominator in the form $a\sqrt{b}$, $a + \sqrt{b}$ and $a + b\sqrt{c}$. - Construct an algebraic proof of number properties. Simplify surds, such as 4(3 $+\sqrt{3}$) and $(2 - \sqrt{3})(4 + \sqrt{3})$ in the form $a + b\sqrt{3}$ - Rationalise the denominator of a surd such as $2/\sqrt{5}$.
<u>Topic: Lines, angles and</u> <u>shapes</u>	- Use the tangent/radius properties of a circle. - Apply circle theorems.		
Big Questions	- Prove circle theorems.		
- Show me a problem with a right-angle in a semi-circle.			
- Show me a problem where two angles are subtended by the same arc.			
- Show me a problem involving a cyclic quadrilateral.			
Topic: Simplifying and substituting	- Expand products of more than two binomials.	- Factorise quadratics in the form $ax^2 + bx + c = 0$ where $a = 1$.	- Simplify algebraic fractions that involve factorising.
<u>Big Questions</u> - Can you have a negative square root? - Expand (a + b) ³	- Recognise and factorise the difference of two squares.	- Factorise quadratics in the form ax ² + bx + c = 0 where a > 1.	 Interpret the succession of two functions as a 'composite function'. Interpret the reverse process as the 'inverse function'.

Expression: A collection of terms. (Simplified)

Equation: Expressions that equal one another. (Solved) (An inequality is a special ≠ equation)

An equation that is true for all values of the variables. An identity seen as a general rule. An expression for which inputs (e) are used to generate outputs from inputs.
<u>utity:</u> A Show) of <u>Mula:</u> A Substitute

Constants are numbers that stand on their own.

They will not have an "x", "y", "z", or any other variable attached to them. They can be small numbers, like "7", or big numbers, like "23 849".

Variables are symbols that stand for numbers that vary. A variable is usually written as a letter, such as "x", "y", or "z".

The difference between constants and variables is that the value of a variable can change, while the value of a constant stays the same.

Key Facts -

SUBSTITUTION SUBSTITUTION means putting numbers where the letters are.

x = 5

SIMPLIFYING AND SUBSTITUTION KNOWLEDGE ORGANISER

Key Facts - Adding and Subtracting

Consider the family meal below.

EXPANDING

We need to group the same items together, so when we order through the drive-through its simple.

3b + f + 5c + 3b + s + 2f + m + 2m + mf + c + s + 2b This would be a mouthful to say into the microphone

This would be a mouthful to say into the microphoni when ordering ... so lets group all the same items together.

	If the coefficient is	we don't write it.			8b +2s +6c +3f + 3m + mf
3b + 2b +3b = 8 burgers s + s = 2 salads	5c + c = 6 cokes	f+2f-3 fries	m + 2m = 3 milkshakes	1 McFlurry	8b +2s +6c

iput	where	hor	ett.
A function is a special relationship where each input has a single output.	It is often written as "I(x)" where \boldsymbol{x} is the input value.	A function put inside another tunction e.g. tg(x)	An inverse function goes the other way, e.g. if $f(x) = 2x + 3$ then $f^{-1}(x) = \frac{x-3}{x}$
A fun relation has a	It is o X is th	A fund tunct	An inverse other way, e.g. if $f(x)$ = $f^{-1}(x) = 0$
Function $f(x)$ or $x \to or y = \frac{1}{x^2}$	Aucherman Signa and scorpar	Composite Function	Inverse Function $f^{-1}(x)$

EXPANDING means multiplying all terms together and simplifying. Single brackets a 3 3 3 3 3 3 means:

+12

4

"3 times (a + 4)" Double brackets

= 3a + 12

(a+2)(a+3) = a+3 $\frac{a^2}{+3a}$ +6

ဖ

a² + 5a +

П

"(a + 2) times (a + 3)"

means:

Example of expanding more than two binomials: (x + 3)(x - 5)(x + 4)First two brackets expand to $x^2 + 3x - 5x - 15 = x^2 - 2x - 15$ $(x^2 - 2x - 15)(x + 4)$ We now must multiply everything in the left hand bracket by x and then by 4 $(x^2 - 2x^2 - 15x + 4x^2 - 8x - 60 = x^3 + 2x^2 - 23x - 60$ If you have three binomials times together, you will end up with a cubic expression, 4 will make a quartic expression and so on.

G1-

x x³ -2x² -5x x + 4 x² -60

×2-

FUNCTIONS

3pl x 7c = 21plc v

,X

 $(x + 3)(x - 5)(x + 4) = x^3 - 2x^2 - 23x - 60$

How to Factorise a Single Br 14y² + 21y

Find the highest common factor of 14 and 21

Y is the common factor letter

7 is the highest common factor

FACTORISING

Factorise... 14y² + 7y and 21y + 7y

7y(2y + 3)

How to Factorise a Quadratic Equation

quadratic Equation	B) How to factorise when the coefficient of x ² is >1	2x ² -5x - 12	 Multiply 2 x -12 = -24 	 Find the factors of -24 which sum to give you -5 and multiply to give you -24 3 × -834 	5-=0 3+-8	2x ² -8x +3x -12	 Factorise the first two terms and the last two terms 	2x ² - 8x + 3x - 12 2x(x - 4) + 3(x - 4)	 Use the 'common factor term' of (x - 4) as the first bracket 	 Use what is 'left over' 2x + 3 as the other bracket (2x + 3) (x - 4) 	
now to ractorise a	A) How to factorise when the coefficient of x² is = 1	<pre>x² + 8x + 15 x² + 6x + 15 Find the factors of 15 which sum to 8.</pre>	 Factors of 15 are: 1, 15, 3, 5 	 Only 3 and 5 sum to 8 and multiply to give 15 3 + 5 = 8 	(G + X)(E + X)	(<u>+</u> n)	<u>z</u> n¥ — <u>z</u> a *	2≤ 4)52∕	<u>z</u> q2 _ (<u>+</u> q)6	- [*] <i>n</i> ⁴	o sonsisti C)

SCHOOL	Date Due:	Score to beat:
Section A:Number	Section B: Algebra Geometry & measures	Section C: Using and applying
$\mathbf{\overline{n}}$ 1. Write $\frac{5}{6}$ as a recurring decimal	11. Factorise: x ² - 6x + 8	 21. Linear-Quadratic-Cubic-Reciprocal Which function is represented by this graph?
2. Write 0. 23 as a fraction	12. Factorise: x ² - 81	
 Work out the balance for £5000 invested for 5 years at 7% per annum 	14. Multiply & simplify: (x - 2)(2x + 1)	22. What inequality is represented here?
4. The value of a car depreciates by 18% per year. Work out the current value of a car bought 4 years ago for £20000.	14. Multiply & simplify: (2x - 7)²	
 In a '20% off' sale, a coat was £120. Work out the original price. 	15. Make u the subject of the formula: $v^2 = u^2 + 2as$	23. On a spinner: P(3) = ⅔ and the p(4) = ⅓ What is the probability of getting 3 or 4
 The cost of a lamp has increased by 30% to £65. Work out the original price. 	16. Make y the subject of the formula: A = xy + yz	
7. Write 0.0028 in standard form:	u = -3 17. $S = \frac{u^2 + v^2}{2a}$ Find S when, $v = -1$ 2a $a = 5$	24. A courgette seed and a pumpkin seed is planted. P(courgette seed germinates) = 1⁄5
8. Write 4.2 x 10 ⁴ as an ordinary number	u = 20 18. D= ut + kt ² Find D when $t = \frac{34}{k}$ k = -5	P(pumpkin seed germinates) = % What is the probability that BOTH seeds germinate?
9. Work out (9x10 ⁷) ÷ (3 x 10 ⁴) Give your answer in standard form	19. If sinx = $\frac{3}{4}$, find x (3sf)	25. Show on the cumulative frequency graph how to take the lower quartile reading
10. Work out (6.2x10 ⁵) x (3.8 x 10 ⁷) Give your answer in standard form	20. Each of these measures is rounded to nearest whole: a = 5cm and b = 3cm Calculate the upper bound of a - b	Ct E0
