Computing

Year 7 Term 3:
Systems Architecture & Binary

Name:

Class:

Teacher:

Enquiry Questions

- What **Computer Systems** do we use in our daily life?
- What are the main **elements** of a computer that differentiate it from other devices?
- What are the Key **differences** between an input, output and a process?
- What are some of the key components of a **Computer System**?
- How do Computers **communicate** with each other using **Binary** language?
- How do we **add** a **binary** number?
- How new **developments** in IT/Computer technology have helped improve the following aspects of our life in the **modern world**.

Vocabulary

Computer System is a machine that can store, or taken an input of data, process it and output it to meaningful information.	Data Computer data is a bunch of ones and zeros, known as binary data. Because all computer data is in binary format, it can be created, processed, saved, and stored digitally.	Information Meaningful representation of data into text, sound, images, which humans can actually use in their day to day use is described as information. Information is computer data processed or stored by a computer.
Hardware Any computer component that you can physically touch is hardware for example, CPU, RAM, keyboard	Software Any data/ information in the form of programs you run on your computer as classed as software. An example of this could be Mac OSx, IOS, even windows 10, Fortnite game.	
Input When data is fed into the computer system by a human being or a sensor for processing.	Process is when the Central Processing Unit (CPU) is able to carry out the thinking. So as an example, tasks such as calculations, sort, comparing, and searching of data and representing it into meaningful data which we call information.	Output When data or information is represented to us in the form of sound, image, text. These could be outputted by various devices that we know as speakers, monitor and even a printer.
CPU is the brain of a computer system which carries out the fetch- decode – execute cycle, in other words all the processing of data is carried out in this unit.	Motherboard Is the main circuit board found in the PC system, which connects all the hardware components of the PC, and allows all components to talk to each other?	Ram The random access memory holds data temporarily which needs to be accessed immediately by the CPU, this data could be anything that you are currently using while browsing websites, using word documents or playing a game.
Secondary Storage Is device which stores information long term such as your hard drive which stores your files, documents and your movies?	FDE cycle Is when the CPU fetches data from the RAM, Decodes it and then executes it.	Hertz Is when a CPU completes one FDE cycle per second, these day our PCs can do this 1,000,000,000 per second , in other words 1 Ghz.
Binary language is simplest language which computers use to communicate with each other, and it is comprised up of only two numbers, a 0 and a 1.	ASCII The letter "A" on a keyboard converts to 01000001 in binary A code where each number represents a character can be used to convert text into binary. One code we can use for this is called ASCII.	Byte Is an 8 bit number , such as 00001111 , our school computers can contain One billion of similar numbers.

Engage Task

Lesson 1

Big Question: What are inputs, processes and outputs within a computer?

Label the parts of the computer using the words given below:

Engage Task

Lesson 2

Big Question: What are the main components of a computer?

Answer the recall questions below:

1. What is hardware?
2. What is software?
3. Give 3 examples of hardware
4. Give 3 examples of software
5. What does the term input device mean?

Engage Task

Lesson 3

Big Question: Can we convert binary into words/messages?

Answer the recall questions below:

1. What is a CPU?
2. How would you define RAM?
3. How would you define ROM?
4. What goes into the CPU? Main memory, storage and _____?
5. What does F – D – E represent? (Label the table below)

Engage Task

Lesson 4

Big Question: How does the computer understand every number, letter and symbol on your keyboard?

What does this say?

10111 00101 01100 00011 01111
01101 00101

16	8	4	2	1

Write your answer here:

Number	Letter
A	1
B	2
C	3
D	4
E	5
F	6
G	7
H	8
I	9
J	10
K	11
L	12
M	13
N	14
O	15
P	16
Q	17
R	18
S	19
T	20
U	21
V	22
W	23
X	24
Y	25
Z	26

Spelling

Lesson 4 - Keywords

Spelling keywords is important. Working on your feedback we will now work on spelling some key words from this unit.

You will write the keywords as they are announced then you will mark them at the end with your green pen.

1. _____

2. _____

3. _____

4. _____

5. _____

6. _____

7. _____

8. _____

9. _____

10. _____

How many did you get?

/ 10

Engage Task

Lesson 5

Big Question: How has communication technology developed over time?

Work out what the question says below?

10111 01000 00001 10100 01001 10011
01111 10101 10010 01110 00001 01101
00101 ?

16	8	4	2	1

Write the question and your answer below:

Number	Letter
A	1
B	2
C	3
D	4
E	5
F	6
G	7
H	8
I	9
J	10
K	11
L	12
M	13
N	14
O	15
P	16
Q	17
R	18
S	19
T	20
U	21
V	22
W	23
X	24
Y	25
Z	26

Homework & Knowledge

Homework 1

Due Date: _____

1. What is the Input, Output and the process in supermarket Self-checkout system?
(Draw a diagram to help)

Homework 2

Due Date: _____

1. Can you use your skills and knowledge gained from lessons using ASCII to convert a secret message into Binary, and also include the answer so that your peer can convert it back successfully?

Knowledge:

What is a computer system?

Is a machine made up of hardware and software. This machine can store, or taken an input of data, process it and output it to meaningful information.

What is Hardware?	What is Software?
Objects that you can touch, like a Music CD. For example: Disks, disk drives, display screens, keyboards, printers, boards, and chips.	You cannot 'touch' software. Software refers to the programs that run on a computer, rather like the music playing on a CD. Examples of software:

Central Processing Unit

The main chip in a computer is the microprocessor chip, which is also known as the CPU (central processing unit). The CPU is mounted on a printed circuit board called the main board or mother board. This chip is considered to be the controlling chip of a computer system since it controls the activities of other chips as well as outside devices connected to the computer, such as monitor and printer. In addition, it can also perform logical and computational tasks.

Memory or Storage Unit

Memory or Storage unit is used for storing Data during before and after processing. The capacity of storage is expressed in terms of Bytes.

Memory

This unit retains temporarily results till further processing, For example, Random Access Memory (RAM). This memory is volatile, which means data disappears when the power is lost.

Storage

The storage or "secondary storage" is used for retain digital data after processing for permanently. For example hard drive. The Storage is non-volatile in nature.

Output Unit

Output Unit receives information from the CPU and then delivers it the external storage or device in the soft or hard processed form. The Monitor or printer is common output device.

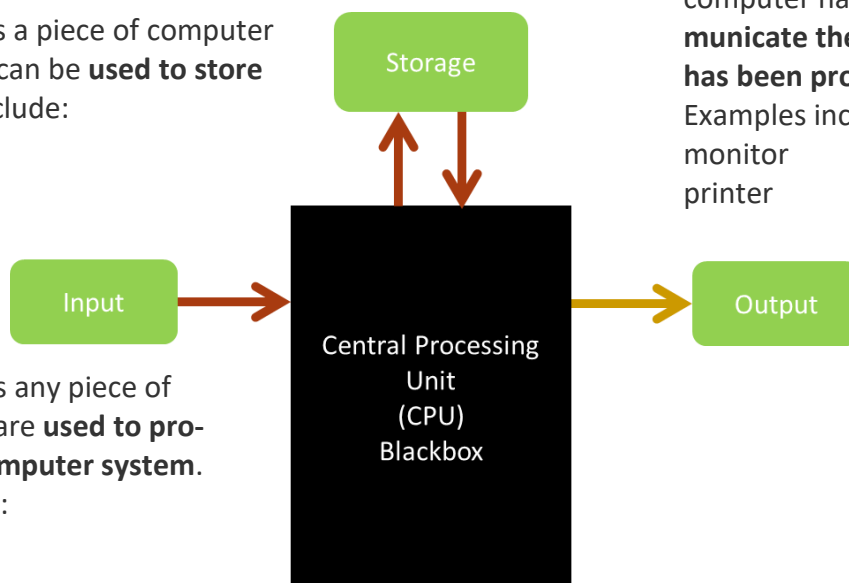

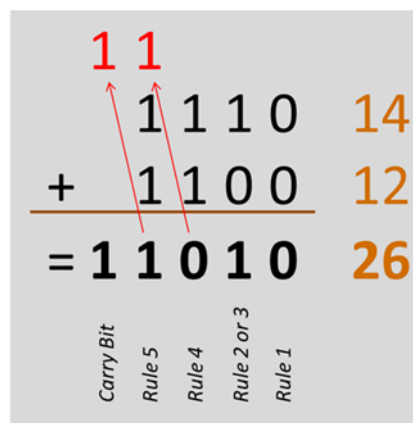

The Main elements of a computer

A **storage device** is a piece of computer equipment which can be **used to store data**. Examples include:
hard disk drive
DVD drive
USB stick

An **input device** is any piece of computer hardware **used to provide data to a computer system**. Examples include:
keyboard
mouse
scanner
digital camera
webcam

An **output device** is any piece of computer hardware **used to communicate the results of data that has been processed**. Examples include:
monitor
printer

Binary Conversion II:

Binary to decimal method

00010101 = 21 Why?

128	64	32	16	8	4	2	1
0	0	0	1	0	1	0	1

Add the numbers together where the 1 appears.

$$16 + 4 + 1 = 21$$

10000001 = 129

128	64	32	16	8	4	2	1
1	0	0	0	0	0	0	1

Convert 186 from Denary to Hexadecimal

0 0
1 1
2 2
3 3
4 4
5 5
6 6
7 7
8 8
9 9
A 10
B 11
C 12
D 13
E 14
F 15

128	64	32	16	8	4	2	1
1	0	1	1	1	0	1	0

$$128 + 32 + 16 + 8 + 2 = 186$$

8	4	2	1
1	0	1	1

$$8 + 2 + 1 = 11$$

B

8	4	2	1
1	0	1	0

$$8 + 2 = 10$$

A
